DATE MAILED: 08/02/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

09/703,412

Applicant(s)

SWINTON ET AL.

Examiner

Djenane M Bayard

Art Unit

2141

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 23 April 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-62 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-62 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

### ***Response to Argument***

1. This is in response to amendment filed on 4/28/04 in which claims 1-4 and 6-62 are pending. The applicant's amendment has been fully considered but they are moot based on the new ground of rejection. Therefore, this case is made final.

2. As per claims 1, 21 and 41, applicant asserted on page 13 that "plug and play devices use a standard protocol, when you attach a new hardware device to the computer and boot up, the operating system will detect the new hardware and install it, sometimes requiring some additional information about the device which must be given by the user". However, the applicant is interpreting the claim very narrowly without considering the broad teaching of the references used in the rejection. The digital camera and the host devices must recognize each other in a query/response fashion in order to establish communication. Furthermore, applicant fails to describe how the digital camera is able to store information in order to recognize a variety of host devices. Hence, Applicant's aforementioned assertion is moot.

### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1, 21 and 41 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure, which is not enabling. "automatically identifying the particular host device that the digital camera device is currently connected to, including determining communication information allowing communication between the digital camera device and the particular host device" critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). The applicant fails to describe how the digital camera holds information to "automatically identify the particular host device" when the not be able to hold information in order to identify any that is connected to.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. Claims 1-2, 6, 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Application No. 2002/0171737 to Tullis in view of U.S. Pub. No. 2003/0135681 to Laity et al.

a. As per claim 1, Tullis et al teaches a method for providing a variety of disparate host devices access to digital images residing on a digital camera device, the method comprising: based on said determined communication information, establishing a communication session between the digital camera device and the particular host device, said communication session supporting photo-serving communication protocols that present the digital camera device as a file server to the host device (See page 1, paragraph [0009]); and through said photo-serving communication protocols, allowing the host device to access digital images residing on the digital camera device, as if the digital camera device were a file server (See page 3, paragraph [0028])). However, Tullis et al fails to teach upon connection the digital camera device to a particular host device that is capable of hosting digital camera device automatically identifying the particular host device that the digital camera device is currently connected to (Plug and Play) including determining communication information allowing communication between the device and the host

Laity et al teaches a computer port expansion. Furthermore, Laity et al teaches upon connection the digital camera device to a particular host device that is capable of hosting digital camera device automatically identifying the particular host device that the digital camera device is currently connected to (Plug and Play) including determining communication information allowing communication between the device and the host (See col. 1, paragraph [0006], lines 1-8).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate automatically identifying the particular host device that the digital camera device is currently connected to as taught by Laity et al in order to facilitate the

connection and operation of the many kinds of peripheral devices and functions (See col. 1, paragraph [0006], lines 1-3).

b. As per claim 2, Tullis et al in view of Laity et al teaches the claimed invention as described above. Furthermore, Tullis et al teaches wherein said connecting step includes: connecting the portable device to a particular host device over a wireless communication medium (See page 1, paragraph [0009]).

c. As per claim 6, Tullis et al teaches wherein particular host device comprises a handheld computing device (See col. 5, lines 44-45)

d. As per claim 9, Tullis et al in view of Laity et al teaches the claimed invention as described above. Furthermore, Tullis et al teaches wherein said particular host device includes facilities for offloading digital images from said digital camera device (See page 3, paragraph [0029]).

e. As per claim 10, Tullis et al in view of Laity et al teaches the claimed invention as described above. Furthermore, Steinberg et al teaches wherein said particular host device includes facilities for manipulating digital images, while those digital images reside on said digital camera device (See page 3, paragraph [0024]).

f. As per claim 11, Tullis et al in view of Laity et al teaches the claimed invention as described above. However, Tullis et al fails to teaches wherein said identifying step occurs immediately upon connection of the digital camera to the particular host device.

Laity et al teaches wherein said identifying step occurs immediately upon connection of the digital camera to the particular host device Plug and Play) (See col. 1, paragraph [0006], lines 1-8).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said identifying step occurs immediately upon connection of the digital camera to the particular host device as taught by Laity et al in the claimed invention of Tullis et al in order to facilitate the connection and operation of the many kinds of peripheral devices and functions (See col. 1, paragraph [0006], lines 1-3).

7. Claims 3-4, 12, 17-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Application No. 2002/0171737 to Tullis in view of U.S. Pub. No. 2003/0135681 to Laity et al as applied to claim 1 above, and further in view of 6,628,325 to Steinberg et al.

a. As per claim 3, Tullis et al in view of Laity et al teaches the claimed invention as described above. However, Tullis et al teaches wherein said connecting step includes: connecting the digital camera device to a particular host device over a wireline communication medium.

Steinberg et al teaches wherein said connecting step includes: connecting the digital camera device to a particular host device over a wireline communication medium (See col. 2, lines 45-46).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said connecting step includes: connecting the digital camera device to a particular host device over a wireline communication medium as taught by Steinberg et al in the claimed invention of Tullis et al in view of Laity et al in order to transfer image data from the camera to the destination (See col. 10, lines 36-40).

b. As per claim 4, Tullis et al in view of Laity et al teaches the claimed invention as described above. However, Tullis et al teaches wherein said wireline communication medium includes a selected one of serial (RS-232) and USB (Universal Serial Bus) connectivity (See col. 2, lines 45-46).

Steinberg et al teaches wherein said wireline communication medium includes a selected one of serial (RS-232) and USB (Universal Serial Bus) connectivity (See col. 2, lines 45-46).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said wireline communication medium includes a selected one of serial (RS-232) and USB (Universal Serial Bus) connectivity as taught by Steinberg et al in the claimed invention of Tullis et al in view of Laity et al in order to transfer image data from the camera to the destination (See col. 10, lines 36-40).

c. As per claim 12, Tullis et al in view of Laity et al teaches the claimed invention as described above. However, Tullis et al fails to teach wherein said identifying step includes: probing the particular host device in a query/response fashion, for identifying the particular host device.

Steinberg teaches wherein said identifying step includes: probing the particular host device in a query/response fashion, for identifying the particular host device (See col. 10, lines 62-64).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said identifying step includes: probing the particular host device in a query/response fashion, for identifying the particular host device as taught by Steinberg in the claimed invention of Tullis et al in view of Laity et al in order to transfer image data from the camera to the destination (See col. 10, lines 36-40).

d. As per claim 17, Steinberg et al in view of Laity et al teaches the claimed invention as described above. Furthermore, Steinberg et al teaches wherein said photo-serving communication protocols comprise a photo-specific interface allowing the particular host device to directly access digital images on a per-file basis, while those images reside on the digital camera device (See col. 8, lines 41-47).

e. As per claim 18, Steinberg et al in view of Laity et al teaches the claimed invention as described above. Furthermore, Steinberg et al teaches wherein said photo-serving communication protocols comprise a command set providing the particular host device with file-

based access and manipulation of digital images residing on the digital camera device (See col. 8, lines 41-47).

8. Claims 7-8, 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Application No. 2002/0171737 to Tullis in view of U.S. Pub. No. 2003/0135681 to Laity et al as applied to claim 1 above, and further in view of U.S. Pub No. 2003/0142215 to Ward et al.

a. As per claim 7, Tullis et al in view of Laity et al teaches the claimed invention as described above. However, Tullis et al in view of Laity et al fails to teach wherein said particular host device comprises a cellular phone device.

Ward et al teaches a network configuration file for automatically transmitting images from and electronic still camera. Furthermore, Ward et al teaches wherein said particular host device comprises a cellular phone device (See paragraph [0014], lines 31-34 and figure 4).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said particular host device comprises a cellular phone device as taught by Ward et al in the claimed invention of Tullis et al in view of Laity et al in order to transmit the pictures directly from the digital camera (See paragraph [0003], lines 7-9).

b. As per claim 8, Tullis et al in view of Laity et al teaches the claimed invention as described above. However, Tullis et al in view of Laity et al fails to teach wherein said particular host device and said digital camera device support TCP/IP connectivity.

Ward et al teaches wherein said particular host device and said digital camera device support TCP/IP connectivity. (See paragraph [0012], lines 17-19).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said particular host device and said digital camera device support TCP/IP connectivity as taught by Ward et al in the claimed invention of Tullis et al in view of Laity et al in order to transmit the pictures directly from the digital camera (See paragraph [0003], lines 7-9).

c. As per claim 16, Tullis et al in view of Laity et al teaches the claimed invention as described above. However, Tullis et al in view of Laity et al fails to teach wherein said communication session established between the digital camera device and the particular host device employs TCP/IP.

Ward et al teaches wherein said communication session established between the digital camera device and the particular host device employs TCP/IP (See paragraph [0012], lines 17-19).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said communication session established between the digital camera device and the particular host device employs TCP/IP as taught by Ward in the claimed

invention of Tullis et al in view of Laity et al in order to order to transmit the pictures directly from the digital camera (See paragraph [0003], lines 7-9).

9. Claims 13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Application No. 2002/0171737 to Tullis in view of U.S. Pub. No. 2003/0135681 to Laity et al and further in view of 6,628,325 to Steinberg et al as applied to claim 12 above, and further in view of U.S. No. 5,737,491 to Allen et al.

a. As per claim 13, Tullis et al in view of Laity et al teaches the claimed invention as described above. However, Tullis et al in view of Laity et al fails to teach wherein said probing step includes referencing a knowledgebase that stores expected responses, for identifying the particular host device.

Allen et al teaches an electronic imaging system capable of image capture, local wireless transmission and voice recognition. Furthermore, Allen et al teaches includes referencing a knowledgebase that stores expected responses, for identifying the particular host device (See col. 4, lines 55-59).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate includes referencing a knowledgebase that stores expected responses, for identifying the particular host device as taught by Allen et al in the claimed invention of Tullis et al in view of Laity et al in order to in order to provide easy control over fast delivery of

digital images in the field that allows a choice of different communication relay services. (See col. 1, lines 58-60)

b. As per claim 14, Tullis et al in view of Laity et al teaches the claimed invention as described above. However, Tullis et al in view of Laity et al fails to teach wherein said expected responses comprise factory preset values.

Allen et al teaches an electronic imaging system capable of image capture, local wireless transmission and voice recognition. Furthermore, Allen et al teaches wherein said expected responses comprise factory preset values (See col. 2, lines 52-58).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said expected responses comprise factory preset values as taught by Allen et al in the claimed invention of Tullis et al in view of Laity et al in order to provide easy control over fast delivery of digital images in the field that allows a choice of different communication relay services. (See col. 1, lines 58-60)

c. As per claim 15, Tullis et al in view of Laity et al teaches the claimed invention as described above. However, Tullis et al in view of Laity et al fails to teach wherein said knowledgebase is stored in a registry of the digital camera device.

Allen et al teaches wherein said knowledgebase is stored in a registry of the digital camera device (See col. 4, lines 14-35).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said knowledgebase is stored in a registry of the digital camera

device as taught by Allen et al in the claimed invention of Steinberg et al in view of Laity et al in order to in order to provide easy control over fast delivery of digital images in the field that allows a choice of different communication relay services. (See col. 1, lines 58-60).

10. Claims 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Application No. 2002/0171737 to Tullis in view of U.S. Pub. No. 2003/0135681 to Laity et al as applied to claim 1 above, and further in view of U.S. Patent No. 6,148,354 to Ban et al

a. As per claim 19, Tullis et al in view of Laity et al teaches the claimed invention as described above. However, Tullis et al in view of Laity et al fails to teach providing host-side support for the photo-serving communication protocols by injecting an appropriate driver into the particular host device.

Ban et al teaches architecture for a universal serial bus-based Pc flash disk. Furthermore, Ban et al teaches providing host-side support for the photo-serving communication protocols by injecting an appropriate driver into the particular host device (See col. 9, lines 1-27).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate providing host-side support for the photo-serving communication protocols by injecting an appropriate driver into the particular host device as taught by Ban et al in the claimed invention of Tullis et al in view of Laity et al in order to provide protocol flexibility for mixed-mode isochronous data transfers and asynchronous messaging, integration

in commodity technology and provision of a standard interface for rapid integration into any given host device (See col. 1, lines 58-62).

b. As per claim 20, Tullis et al in view of Laity et al teaches the claimed invention as described above. However, Tullis et al in view of Laity et al fails to teach wherein the appropriate driver is initially stored on said digital camera device and is injected into the particular host device upon connection of the two devices together.

Ban et al teaches wherein the appropriate driver is initially stored on said digital camera device and is injected into the particular host device upon connection of the two devices together (See col. 1, lines 66-67 and col. 2, lines 1).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein the appropriate driver is initially stored on said digital camera device and is injected into the particular host device upon connection of the two devices together as taught by Ban et al in the claimed invention of Tullis et al in view of Laity et al in order to provide protocol flexibility for mixed-mode isochronous data transfers and asynchronous messaging, integration in commodity technology and provision of a standard interface for rapid integration into any given host device (See col. 1, lines 58-62).

11. Claims 21-22, 26, 31, 37-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Application No. 2002/0171737 to Tullis in view of U.S. Pub. No. 2003/0135681 to Laity et al and further in view of U.S. Patent No. 6,148,354 to Ban et al.

a. As per claim 21, Tullis et al teaches a method for providing a variety of disparate host devices access to digital images residing on a digital camera device, the method comprising: based on said determined communication information, establishing a communication session between the digital camera device and the particular host device, said communication session supporting photo-serving communication protocols that present the digital camera device as a file server to the host device (See page 1, paragraph [0009]); and through said photo-serving communication protocols, allowing the host device to access digital images residing on the digital camera device, as if the digital camera device were a file server (See page 3, paragraph [0028])). However, Tullis et al fails to teach upon connection the digital camera device to a particular host device that is capable of hosting digital camera device automatically identifying the particular host device that the digital camera device is currently connected to (Plug and Play) including determining communication information allowing communication between the device and the host

Laity et al teaches a computer port expansion. Furthermore, Laity et al teaches upon connection the digital camera device to a particular host device that is capable of hosting digital camera device automatically identifying the particular host device that the digital camera device is currently connected to (Plug and Play) including determining communication information allowing communication between the device and the host (See col. 1, paragraph [0006], lines 1-8).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate automatically identifying the particular host device that the digital

camera device is currently connected to as taught by Laity et al in order to facilitate the connection and operation of the many kinds of peripheral devices and functions (See col. 1, paragraph [0006], lines 1-3). ). However, Tullis et al fails to teach if needed by the host for supporting said file-serving communication protocols, automatically uploading a driver from the portable device to the particular host device and thereafter invoking execution of the driver at the particular host device, for providing host-side support for said file-serving communication

Ban et al teaches architecture for a universal serial bus-based pc flash disk. Furthermore, Ban et al teaches if needed by the host for supporting said file-serving communication protocols, automatically uploading a driver from the portable device to the particular host device and thereafter invoking execution of the driver at the particular host device, for providing host-side support for said file-serving communication ( See col. 9, lines 1-27).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate if needed by the host for supporting said file-serving communication protocols, automatically uploading a driver from the portable device to the particular host device and thereafter invoking execution of the driver at the particular host device, for providing host-side support for said file-serving communication as taught by Ban et al in the claimed invention of Steinberg et al in order to provide protocol flexibility for mixed-mode isochronous data transfers and asynchronous messaging, integration in commodity technology and provision of a standard interface for rapid integration into any given host device (See col. 1, lines 58-62)

b. As per claim 22, Tullis et al in view of Laity et al teaches the claimed invention as described above. Furthermore, Tullis et al teaches wherein said connecting step includes:

connecting the portable device to a particular host device over a wireless communication medium (See page 1, paragraph [0009]).

c. As per claim 26, Tullis et al teaches wherein particular host device comprises a handheld computing device (See col. 5, lines 44-45)

d. As per claim 31, Tullis et al in view of Laity et al further in view of Ban et al teaches claimed invention as described above. However, Tullis et al fails to teach wherein said identifying step occurs immediately upon connection of the portable device to the particular host device.

Ban et al teaches wherein said identifying step occurs immediately upon connection of the portable device to the particular host device (See col. 1, lines 66-67 and col. 2, line 1).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said identifying step occurs immediately upon connection of the portable device to the particular host device as taught by Ban et al in the claimed invention of Steinberg et al in order to provide protocol flexibility for mixed-mode isochronous data transfers and asynchronous messaging, integration in commodity technology and provision of a standard interface for rapid integration into any given host device (See col. 1, lines 58-62).

e. As per claim 37, Tullis et al in view of Laity et al further in view of Ban et al teaches the claimed invention as described above. Furthermore, Tullis et al teaches wherein said photo-serving communication protocols comprise a photo-specific interface allowing the particular host device to directly access digital images on a per-file basis, while those images reside on the digital camera device (See page 4, paragraph [0036]).

f. As per claim 38, Tullis et al in view of Laity et al further in view of Ban et al teaches the claimed invention as described above. Furthermore, Tullis et al teaches wherein said photo-serving communication protocols comprise a command set providing the particular host device with file-based access and manipulation of digital images residing on the digital camera device (See page 3, paragraph [0024]).

g. As per claim 39, Tullis et al teaches the claimed invention as described above. However, Tullis et al fails to teach providing host-side support for the photo-serving communication protocols by injecting an appropriate driver into the particular host device.

Ban et al teaches architecture for a universal serial bus-based Pc flash disk. Furthermore, Ban et al teaches providing host-side support for the photo-serving communication protocols by injecting an appropriate driver into the particular host device (See col. 9, lines 1-27).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate providing host-side support for the photo-serving communication protocols by injecting an appropriate driver into the particular host device as taught by Ban et al

in the claimed invention of Tullis et al in view of Laity et al in order to provide protocol flexibility for mixed-mode isochronous data transfers and asynchronous messaging, integration in commodity technology and provision of a standard interface for rapid integration into any given host device (See col. 1, lines 58-62).

h. As per claim 40, Tullis et al teaches the claimed invention as described above. However, Tullis et al fails to teach wherein the appropriate driver is initially stored on said digital camera device and is injected into the particular host device upon connection of the two devices together.

Ban et al teaches wherein the appropriate driver is initially stored on said digital camera device and is injected into the particular host device upon connection of the two devices together (See col. 1, lines 66-67 and col. 2, lines 1).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein the appropriate driver is initially stored on said digital camera device and is injected into the particular host device upon connection of the two devices together as taught by Ban et al in the claimed invention of Tullis et al in order to provide protocol flexibility for mixed-mode isochronous data transfers and asynchronous messaging, integration in commodity technology and provision of a standard interface for rapid integration into any given host device (See col. 1, lines 58-62).

12. Claims 23-25, 29-30, 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Application No. 2002/0171737 to Tullis in view of U.S. Pub. No. 2003/0135681 to

Laity et al and further in view of U.S. Patent No. 6,148,354 to Ban et al as applied to claim 21 above and further in view of U.S. Patent No. 6,628,325 to Steinberg et al.

a. As per claim 23, Tullis et al in view of Laity et al further in view of Ban et al teaches the claimed invention as described above. However, Tullis et al teaches wherein said connecting step includes: connecting the digital camera device to a particular host device over a wireline communication medium.

Steinberg et al teaches wherein said connecting step includes: connecting the digital camera device to a particular host device over a wireline communication medium (See col. 2, lines 45-46).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said connecting step includes: connecting the digital camera device to a particular host device over a wireline communication medium as taught by Steinberg et al in the claimed invention of Tullis et al in view of Laity et al in order to transfer image data from the camera to the destination (See col. 10, lines 36-40).

b. As per claim 24, Tullis et al in view of Laity et al teaches the claimed invention as described above. However, Tullis et al teaches wherein said wireline communication medium includes a selected one of serial (RS-232) and USB (Universal Serial Bus) connectivity (See col. 2, lines 45-46).

Steinberg et al teaches wherein said wireline communication medium includes a selected one of serial (RS-232) and USB (Universal Serial Bus) connectivity (See col. 2, lines 45-46).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said wireline communication medium includes a selected one of serial (RS-232) and USB (Universal Serial Bus) connectivity as taught by Steinberg et al in the claimed invention of Tullis et al in view of Laity et al in order to transfer image data from the camera to the destination (See col. 10, lines 36-40).

c. As per claim 25, Tullis et al in view of Laity further in view of Ban et al teaches the claimed invention as described above. however, Tullis et al in view of Laity further in view of Ban et al fail to teach wherein particular host device comprises a computing device.

Steinberg et al teaches wherein particular host device comprises a computing device (See abstract, lines 19-23).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein particular host device comprise a computing device as taught by Steinberg in the claimed invention of Tullis et al in view of Laity et al in order to transfer image data from the camera to the destination (See col. 10, lines 36-40).

d. As per claim 29, Tullis et al in view of Laity further in view of Ban et al teaches the claimed invention as described above. However, Tullis et al in view of Laity further in view of Ban et al fail to teach wherein said particular host device includes facilities for offloading digital images from said digital camera device.

Steinberg et al teaches wherein said particular host device includes facilities for offloading digital images from said digital camera device (See col. 11, lines 1-7).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said particular host device includes facilities for offloading digital images from said digital camera device as taught by Steinberg in the claimed invention of Tullis et al in view of Laity et al in order to transfer image data from the camera to the destination (See col. 10, lines 36-40).

e. As per claim 30, Tullis et al in view of Laity further in view of Ban et al teaches the claimed invention as described above. However, Tullis et al in view of Laity further in view of Ban et al fail to teach wherein said particular host device includes facilities for manipulating digital images, while those files reside on said portable device (See col. 8, lines 41-47).

Steinberg et al teaches wherein said particular host device includes facilities for manipulating digital images, while those files reside on said portable device (See col. 8, lines 41-47).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said particular host device includes facilities for manipulating digital images, while those files reside on said portable device as taught by Steinberg in the claimed invention of Tullis et al in view of Laity et al in order to transfer image data from the camera to the destination (See col. 10, lines 36-40).

f. As per claim 32, Tullis et al in view of Laity et al further in view of Ban et al teaches the claimed invention as described above. However, Tullis et al fails to teach wherein said

identifying step includes: probing the particular host device in a query/response fashion, for identifying the particular host device.

Steinberg teaches wherein said identifying step includes: probing the particular host device in a query/response fashion, for identifying the particular host device (See col. 10, lines 62-64).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said identifying step includes: probing the particular host device in a query/response fashion, for identifying the particular host device as taught by Steinberg in the claimed invention of Tullis et al in view of Laity et al in order to transfer image data from the camera to the destination (See col. 10, lines 36-40).

13. Claim 27-28, 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Application No. 2002/0171737 to Tullis in view of U.S. Pub. No. 2003/0135681 to Laity et al and further in view of U.S. Patent No. 6,148,354 to Ban et al as applied to claim 21 above and further in view of U.S. Pub No. 2003/0142215 to Ward et al.

a. As per claim 27, Tullis et al in view of Laity further in view of Ban et al teaches the claimed invention as described above. However, Tullis et al in view Laity and further in view of Ban et al fails to teach wherein said particular host device comprises a cellular phone device.

Ward et al teaches a network configuration file for automatically transmitting images from and electronic still camera. Furthermore, Ward et al teaches wherein said particular host device comprises a cellular phone device (See paragraph [0014], lines 31-34 and figure 4).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said particular host device comprises a cellular phone device as taught by Ward et al in the claimed invention of Tullis et al in view of Laity and further in view of Ban et al in order to transmit the pictures directly from the digital camera (See paragraph [0003], lines 7-9).

b. As per claim 28, Tullis et al in view of Laity and further in view Ban et al teaches the claimed invention as described above. However, Tullis et al in view of Laity and further in view of Ban et al fails to teach wherein said particular host device and said digital camera device support TCP/IP connectivity.

Ward et al teaches wherein said particular host device and said digital camera device support TCP/IP connectivity. (See paragraph [0012], lines 17-19).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said particular host device and said digital camera device support TCP/IP connectivity as taught by Ward et al in the claimed invention of Tullis et al in view of Laity et al and further in view of Ban et al in order to transmit the pictures directly from the digital camera (See paragraph [0003], lines 7-9).

c. As per claim 36, Tullis et al in view of Laity et al and further in view of Ban et al teaches the claimed invention as described above. However, Tullis et al in view of Laity et al and further in view of Ban et al fails to teach wherein said communication session established between the digital camera device and the particular host device employs TCP/IP.

Ward et al teaches wherein said communication session established between the digital camera device and the particular host device employs TCP/IP (See paragraph [0012], lines 17-19).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said communication session established between the digital camera device and the particular host device employs TCP/IP as taught by Ward in the claimed invention of Tullis et al in view of Laity et al and further in view of Ban et al in order to order to transmit the pictures directly from the digital camera (See paragraph [0003], lines 7-9).

14. Claims 33-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Application No. 2002/0171737 to Tullis in view of U.S. Pub. No. 2003/0135681 to Laity et al and further in view of U.S. Patent No. 6,148,354 to Ban et al as applied to claim 21 above, and further in view of U.S. No. 5,737,491 to Allen et al.

a. As per claim 33, Tullis et al in view Laity and further in view of Ban et al teaches the claimed invention as described above. However, Tullis et al in view of Laity et al and further in

view of Ban et al fails to teach wherein said probing step includes referencing a knowledgebase that stores expected responses, for identifying the particular host device.

Allen et al teaches an electronic imaging system capable of image capture, local wireless transmission and voice recognition. Furthermore, Allen et al teaches includes referencing a knowledgebase that stores expected responses, for identifying the particular host device (See col. 4, lines 55-59).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate includes referencing a knowledgebase that stores expected responses, for identifying the particular host device as taught by Allen et al in the claimed invention of Tullis et al in view of Laity and further in view of Ban et al in order to in order to provide easy control over fast delivery of digital images in the field that allows a choice of different communication relay services. (See col. 1, lines 58-60)

b. As per claim 34, Tullis et al in view of Laity et al and further in view of Ban et al teaches the claimed invention as described above. However, Steinberg et al in view of Ban et al fails to teach wherein said expected responses comprise factory preset values.

Allen et al teaches an electronic imaging system capable of image capture, local wireless transmission and voice recognition. Furthermore, Allen et al teaches wherein said expected responses comprise factory preset values (See col. 2, lines 52-58).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said expected responses comprise factory preset values as taught by Allen et al in the claimed invention of Tullis et al in view of Laity et al further in view

of Ban et al in order to provide easy control over fast delivery of digital images in the field that allows a choice of different communication relay services. (See col. 1, lines 58-60)

c. As per claim 35, Tullis et al in view of Laity et al further in view of Ban et al teaches the claimed invention as described above. However, Tullis et al in view of Laity et al and further in view Ban et al fails to teach wherein said knowledgebase is stored in a registry of the digital camera device.

Allen et al teaches wherein said knowledgebase is stored in a registry of the digital camera device (See col. 4, lines 14-35).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said knowledgebase is stored in a registry of the digital camera device as taught by Allen et al in the claimed invention of Tullis et al in view of Laity et al further in view of Ban et al in order to in order to provide easy control over fast delivery of digital images in the field that allows a choice of different communication relay services. (See col. 1, lines 58-60).

15. Claims 41, 43-45 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,005,613 to Endsley et al in view of U.S. Pub. No. 2003/0135681 to Laity et al.

a. As per claim 41, Endsley et al teaches A portable device allowing a variety of disparate host devices access to files residing on the portable device, upon the portable device's connection

to one of the host devices, the portable device comprising: a connection interface for enabling the connection of the portable device to a particular host device that is capable of hosting the portable device (See abstract, lines 5-7); a communication module for establishing a communication session between the portable device and the particular host device, wherein said communication session supports file-serving communication protocols that present the portable device as a file server to the host device (See col. 4, lines 1-22).

Laity et al teaches a computer port expansion. Furthermore, Laity et al teaches an identification module for automatically identifying the particular host device that the portable device is connected to, including determining communication information allowing communication between the portable device and the particular host device (See col. 1, paragraph [0006], lines 1-8).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate an identification module for automatically identifying the particular host device that the portable device is connected to, including determining communication information allowing communication between the portable device and the particular host device as taught by Laity et al in order to facilitate the connection and operation of the many kinds of peripheral devices and functions (See col. 1, paragraph [0006], lines 1-3).

b. As per claim 43, Endsley et al teaches wherein said connection interface supports connecting the portable device to a particular host device over a wireline communication medium (See col. 4, lines 64-66)

c. As per claim 44, Endsley et al teaches wherein said wireline communication medium includes a selected one of serial (RS-232) and USB (Universal Serial Bus) connectivity (See col. 4, lines 64-66).

d. As per claim 45, Endsley et al teaches wherein said particular host device comprises a computing device (See abstract, lines 1-2)

16. Claims 51, 59 and 62 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,005,613 to Endsley et al in view of U.S. Pub. No. 2003/0135681 to Laity et al and as applied to claim 41 above, and further in view of U.S. Patent No. 6,148,354 to Ban et al.

a. As per claim 51, Endsley et al teaches claimed invention as described above. However, Endsley et al fails to teach wherein said identifying step occurs immediately upon connection of the portable device to the particular host device.

Ban et al teaches wherein said identifying step occurs immediately upon connection of the portable device to the particular host device (See col. 1, lines 66-67 and col. 2, line 1).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said identifying step occurs immediately upon connection of the portable device to the particular host device as taught by Ban et al in the claimed invention of Endsley et al in order to provide protocol flexibility for mixed-mode

isochronous data transfers and asynchronous messaging, integration in commodity technology and provision of a standard interface for rapid integration into any given host device (See col. 1, lines 58-62).

b. As per claim 59, Endsley et al teaches the claimed invention as described above. However, Endsley et al fails to teach providing host-side support for the photo-serving communication protocols by injecting an appropriate driver into the particular host device.

Ban et al teaches an architecture for a universal serial bus-based Pc flash disk. Furthermore, Ban et al teaches providing host-side support for the photo-serving communication protocols by injecting an appropriate driver into the particular host device (See col. 9, lines 1-27).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate providing host-side support for the photo-serving communication protocols by injecting an appropriate driver into the particular host device as taught by Ban et al in the claimed invention of Endsley et al in order to provide protocol flexibility for mixed-mode isochronous data transfers and asynchronous messaging, integration in commodity technology and provision of a standard interface for rapid integration into any given host device (See col. 1, lines 58-62).

c. As per claim 62, Endsley et al in view of Laity teaches the claimed invention as described above. However, Endsley et al fails to teach an injection module for providing host-side support for said file-serving communication protocols if not already present, said driver injection module

operating by automatically uploading a driver from the portable device to the particular host device and thereafter invoking execution of the driver at the particular host device, so that the host device may access files residing on the portable device, as if the portable device were a file server.

Ban et al teaches architecture for a universal serial bus-based pc flash disk. Furthermore, Ban et al teaches wherein a driver injection module for providing host-side support for said file-serving communication protocols if not already present, said driver injection module operating by automatically uploading a driver from the portable device to the particular host device and thereafter invoking execution of the driver at the particular host device, so that the host device may access files residing on the portable device, as if the portable device were a file server (See col. 9, lines 1- 27)

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate a driver injection module for providing host-side support for said file-serving communication protocols if not already present, said driver injection module operating by automatically uploading a driver from the portable device to the particular host device and thereafter invoking execution of the driver at the particular host device, so that the host device may access files residing on the portable device, as if the portable device were a file server as taught by Ban et al in the claimed invention of Endsley et al in order to provide protocol flexibility for mixed-mode isochronous data transfers and asynchronous messaging, integration in commodity technology and provision of a standard interface for rapid integration into any given host device (See col. 1, lines 58-62)

17. Claims 42, 49-50, 52, 57-58 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,005,613 to Endsley et al in view of U.S. Pub. No. 2003/0135681 to Laity et al and as applied to claim 41 above, and further in view U.S. Patent No. 6,628,325 to Steinberg et al.

a. As per 42, Endsley et al in view of Laity et al teaches the claimed invention as described above. However, Endsley et al in view of Ban et al fails to teach wherein said connection interface supports connecting the portable device to a particular host device over a wireless communication medium.

Steinberg et al teaches wherein said connection interface supports connecting the portable device to a particular host device over a wireless communication medium (See col. 4, lines 57-67).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said connection interface supports connecting the portable device to a particular host device over a wireless communication medium as taught by Steinberg et al in view of Laity et al in order to permit a portable digital camera to send image data to a host (See col. 1, lines 44-45).

b. As per claim 49, Endsley et al in view of Laity et al teaches the claimed invention as described above. However, Endsley et al in view of Ban et al fails to teach wherein said particular host device includes facilities for offloading files from said portable device.

Steinberg et al teaches wherein said particular host device includes facilities for offloading files from said portable device (See col. 11, lines 1-7).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said particular host device includes facilities for offloading files from said portable device as taught by Steinberg et al in the claimed invention of Endsley et al in view of Laity et al in order to receive image data from a camera (See col. 2, lines 5-6).

c. As per claim 50, Endsley et al view of Ban et al teaches the claimed invention as described above. However, Endsley et al in view of laity et al fails to teach device of wherein said particular host device includes facilities for manipulating files, while those files reside on said portable device.

Steinberg et al teaches wherein said particular host device includes facilities for manipulating files, while those files reside on said portable device (See col. 8, lines 41-47).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said particular host device includes facilities for manipulating files, while those files reside on said portable device as taught by Steinberg et al in the claimed invention of Endsley et al in view of Laity et al in order to be able to compress or expand files (See col. 8, lines 58-59).

d. As per 52, Endsley et al view of Laity et al teaches the claimed invention as described above. However, Endsley et al in view of Laity et al fails to teach wherein said identification

module probes the particular host device in a query/response fashion, for identifying the particular host device.

Steinberg et al teaches wherein said identification module probes the particular host device in a query/response fashion, for identifying the particular host device (See col. 10, lines 62-64).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein identification module probes the particular host device in a query/response fashion, for identifying the particular host device as taught by Steinberg et al in the claimed invention of Endsley et al in view of Laity et al in order to determine the connection of the host device (See col. 10, line 63).

e. As per claim 57, Endsley et al view of Ban et al teaches the claimed invention as described above. However, Endsley et al in view of Laity et al fails to teach wherein said file-serving communication protocols comprise a file-specific interface allowing the particular host device to directly access files, while those files reside on the portable device.

Steinberg et al teaches wherein said file-serving communication protocols comprise a file-specific interface allowing the particular host device to directly access files, while those files reside on the portable device (See col. 8, lines 41-47).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said file-serving communication protocols comprise a file-specific interface allowing the particular host device to directly access files, while those files

reside on the portable device as taught by Steinberg et al in the claimed invention of Endsley et al in view of Laity et al in order to compress and expand image data files (See col. 8, lines 58-59)

f. As per claim 58, Endsley et al view of Laity et al teaches the claimed invention as described above. However, Endsley et al in view of Laity et al fails to teach wherein said file-serving communication protocols comprise a command set providing the particular host device with file-based access and manipulation of files residing on the portable device.

Steinberg et al teaches wherein said file-serving communication protocols comprise a command set providing the particular host device with file-based access and manipulation of files residing on the portable device (See col. 8, lines 41-47).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said file-serving communication protocols comprise a command set providing the particular host device with file-based access and manipulation of files residing on the portable device as taught by Steinberg et al in the claimed invention of Endsley et al in view of Laity et al in order to compress and expand image data files (See col. 8, lines 58-59)

17. Claim 46 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,005, 613 to Endsley in view of U.S. Pub. No. 2003/0135681 to Laity et al and as applied to claim 41 above, and further in view of U.S. No. 6,535,243 to Tullis et al.

a. As per claim 46, Endsley et al in view of Laity et al teaches the claimed invention as described above. However, Endsley et al in view of Laity et al fails to teach wherein particular host device comprises a handheld computing device

Tullis et al teaches wherein particular host device comprises a handheld computing device (See col. 5, lines 44-45)

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein particular host device comprises a handheld computing device as taught by Tullis et al in the claimed invention of Endsley et al in view of Laity et al in order for the digital camera to access and store large volumes of data (See abstract, lines 1-5).

18. Claims 47-48, 56, 61 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,005, 613 to Endsley in view of U.S. Pub. No. 2003/0135681 to Laity et al and as applied to claim 41 above, further in view of U.S. Pub No. 2003/0142215 to Ward et al.

a. As per claim 47, Endsley et al in view of Laity teaches the claimed invention as described above. However, Endsley et al fails to teach wherein said particular host device comprises a cellular phone device.

Ward et al teaches a network configuration file for automatically transmitting images from and electronic still camera. Furthermore, Ward et al teaches wherein said particular host device comprises a cellular phone device (See paragraph [0014], lines 31-34 and figure 4).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate teach wherein said particular host device comprises a cellular phone device as taught by Ward et al in the claimed invention of Endsley et al in view of Laity et al in order to transmit the pictures directly from the digital camera (See paragraph [0003], lines 7-9).

b. As per claim 48, Endsley et al in view of Laity et al teaches the claimed invention as described above. However, Endsley et al fails to teach wherein said particular host device and said digital camera device support TCP/IP connectivity.

Ward et al teaches wherein said particular host device and said digital camera device support TCP/IP connectivity. (See paragraph [0012], lines 17-19).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said particular host device and said digital camera device support TCP/IP connectivity as taught by Ward et al in the claimed invention of Endsley et al in view of Laity et al in order to transmit the pictures directly from the digital camera (See paragraph [0003], lines 7-9).

c. As per claim 56, Endsley et al in view of Laity et al teaches the claimed invention as described above. However, Endsley et al in view of Laity et al fails to teach wherein said communication session established between the digital camera device and the particular host device employs TCP/IP.

Ward et al teaches wherein said communication session established between the digital camera device and the particular host device employs TCP/IP (See paragraph [0012], lines 17-19).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said communication session established between the digital camera device and the particular host device employs TCP/IP as taught by Ward in the claimed invention of Endsley et al in view of Laity et al in order to order to transmit the pictures directly from the digital camera (See paragraph [0003], lines 7-9).

d. As per claim 61, Endsley et al in view of Laity et al teaches the claimed invention as described above. However, Endsley et al fails to teach wherein said file-serving communication protocols include FTP (File Transport Protocol) support.

Ward et al teaches wherein said file-serving communication protocols include FTP (File Transport Protocol) support (See paragraph [0018]).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said file-serving communication protocols include FTP (File Transport Protocol) support as taught by Ward et al in the claimed invention of Endsley et al in view of Laity in order to transmit the pictures directly from the digital camera (See paragraph [0003], lines 7-9).

19. Claims 53-55 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,005,613 to Endsley et al in view of U.S. Pub. No. 2003/0135681 to Laity et al and as applied to claim 41 above, and further in view of U.S. Patent No. 6,628,325 to Steinberg et al and further in view of U.S. Patent No. 5,737,491 to Allen et al.

a. As per claim 53, Endsley et al teaches the claimed invention as described above. However, Endsley et al fails to teach wherein said probing step includes referencing a knowledgebase that stores expected responses, for identifying the particular host device.

Allen et al teaches an electronic imaging system capable of image capture, local wireless transmission and voice recognition. Furthermore, Allen et al teaches includes referencing a knowledgebase that stores expected responses, for identifying the particular host device (See col. 4, lines 55-59).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate includes referencing a knowledgebase that stores expected responses, for identifying the particular host device as taught by Allen et al in the claimed invention of Endsley et al in order to in order to provide easy control over fast delivery of digital images in the field that allows a choice of different communication relay services. (See col. 1, lines 58-60)

b. As per claim 54, Endsley et al teaches the claimed invention as described above. However, Endsley et al fails to teach wherein said expected responses comprise factory preset values.

Allen et al teaches an electronic imaging system capable of image capture, local wireless transmission and voice recognition. Furthermore, Allen et al teaches wherein said expected responses comprise factory preset values (See col. 2, lines 52-58).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said expected responses comprise factory preset values as taught by Allen et al in the claimed invention of Endsley et al in order to provide easy control over fast delivery of digital images in the field that allows a choice of different communication relay services. (See col. 1, lines 58-60)

c. As per claim 55, Endsley et al teaches the claimed invention as described above. However, Endsley et al fails to teach wherein said knowledgebase is stored in a registry of the digital camera device.

Allen et al teaches wherein said knowledgebase is stored in a registry of the digital camera device (See col. 4, lines 14-35).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein said knowledgebase is stored in a registry of the digital camera device as taught by Allen et al in the claimed invention of Endsley et al in order to in order to provide easy control over fast delivery of digital images in the field that allows a choice of different communication relay services. (See col. 1, lines 58-60)

20. Claim 60 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,005, 613 to Endsley in view of in view of U.S. Pub. No. 2003/0135681 to Laity et al and as applied to claim 41 above, and further in view of U.S. Patent No. 6,529,969 to Inoue.

a. As per claim 60, Endsley et al in view of Laity teaches the claimed invention as described above. However, Endsley et al fails to teach wherein the communication session is initially established using Point-to-Point protocol.

Inoue teaches a reception method and apparatus for searching various first and second source devices adapted to send data signals to analog and optical input terminals. Furthermore, Inoue teaches wherein the communication session is initially established using Point-to-Point protocol (See col. 17, lines 19-25)

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein the communication session is initially established using Point-to-Point protocol as taught by Inoue in the claimed invention of Endsley et al in view of Laity et al in order to actually communicate data between the digital camera and the host device (See col. 18, 53-54).

### ***Conclusion***

Application/Control Number:  
09/703,412  
Art Unit: 2141
